

How Kronos Trades - and How It Could Learn

The live path runs on fixed rules. A separate loop is the experiment that could make the bot adapt.

Today: Kronos is frozen and the meta-gate is dormant, so the bot trades on fixed rules - it does not yet learn.

The loop is the live experiment: feed XGBoost 10x cleaner data and see if an edge appears across folds. If it does, the gate flips to **LIVE** and the bot starts adapting. If not, the edge isn't in these features.
